VIGYAN PRASAR

[AN AUTONOMOUS ORGANISATION OF
DEPARTMENT OF SCIENCE & TECHNOLOGY]
GOVERNMENT OF INDIA

UPDATED REGULARLY
DATE: 16 APRIL, 2020

सत्यमेव जयते
FOREWORD

डॉ हर्ष वर्धन Dr Harsh Vardhan

स्वास्थ्य एवं परिवार कल्याण, विज्ञान और प्रौद्योगिकी
व पृथ्वी विज्ञान मंत्री, भारत सरकार

Union Minister for Health & Family Welfare,
Science & Technology and Earth Sciences
Government of India

सबका साथ, सबका विकास, सबका विश्वास
Sabka Saath, Sabka Vikas, Sabka Vishwas

The 2019 Novel Coronavirus (SARS-CoV-2) has spread rapidly throughout the world and has assumed the proportion of a Pandemic. Given the lack of an efficacious vaccine as well as non-availability of suitable chemotherapeutic interventions, mankind is experiencing an unprecedented existential crisis.

2. The Ministry of Science and Technology and the Ministry of Health & Family Welfare, with their various departments, are contributing in various ways towards the national R&D efforts for developing solutions to combat COVID-19. The Department of Science & Technology under the Ministry has launched a nationwide exercise to map and boost development of COVID-19 solutions with R&D, seed capital and scale-up support. All academic and research institutions are being reoriented to focus on the development of diagnostics, vaccines, antivirals, disease models and other R&D to enable a cure for this dreadful disease. Around 15 labs of Council of Scientific & Industrial Research (CSIR), under the Department of Scientific & Industrial Research, across the country are working in close partnership with major private sector Industries, PSUs, MSMEs and other Government departments to develop solutions for COVID-19. The Department of Biotechnology (DBT) under the Ministry has also formed a consortium to support the development of Medical equipment, Diagnostics, Therapeutics, Drugs and Vaccines to meet the Healthcare Challenges. Indian Council of Medical Research (ICMR), under the Ministry of Health & Family Welfare has already isolated the virus strain successfully, which is a first step towards vaccine research. Similarly, various other organizations under Ministry of Human Resource & Development, Ministry of Defence, Ministry of Chemicals & Fertilizers, etc. are also contributing substantively to our R&D efforts. The private sector has also come forward in a big way to supplement these efforts.

3. With a view to spreading awareness about the S&T efforts of the Government of India as well as private sector in finding solutions for COVID-19, Vigyan Prasar - an autonomous institution under Ministry of Science & Technology and engaged in large-scale science communication and popularization activities - has compiled all initiatives being undertaken in this field.

4. This document "Science & Technology Efforts on COVID-19 in India" shall serve as a ready-reckoner for policy makers, scientists, researchers, scholars and other stakeholders who might be interested in understanding and keeping themselves abreast with the latest S&T efforts being made to develop solutions to combat COVID-19.

(Dr. Harsh Vardhan)

PREFACE

At the fag end of 2019, China informed the World Health Organization (WHO) regarding the occurrence of cases of pneumonia of an unknown cause in Wuhan City in Hubei province. On January 9, 2020, WHO issued a statement saying Chinese researchers have made the preliminary determination of the virus as a novel coronavirus. Since then, several lakhs of positive cases and more than one lakh deaths have been reported due to COVID-19 across the world. Lockdowns, curfews, sealing of hotspots of outbreak area, massive airport screenings, quarantines, and social distancing have become the norm across the globe.

In these critical times, access to authentic information is of paramount importance. Vigyan Prasar (VP) has been covering the pandemic since the early days with the science communication perspective and journalistic flavour, ensuring that science and safety are the primary focus. VP is a national level organization of the Department of Science and Technology, Government of India, engaged in science communication and popularization. The principal objective of VP is to serve India's science popularization agenda. This is achieved through several strategically important two-way, stakeholder-specific approaches to communicate about principles and practices of science and technology and implications for development and quality of life. Science popularization therefore serves as a robust knowledge-led tool to fulfil various mutually reinforcing public policy objectives.

For the benefit of the stakeholders, we have prepared a compilation of the most relevant initiatives and efforts taken by the Government of India through its various Science Ministries, Departments, and Funding organizations. These organizations are geared for combating the epidemic of COVID-19. These research-driven and technology-based interventions have been initiated on war footing to fight out the outburst of the pandemic. Government of India, through its various wings, like Science Ministries, Departments, and Funding organizations, has invited Calls for Proposals (CFPs) and Expression of Interest (EoIs) to enhance research and development-related activities to battle the pandemic out.

We hope this initiative of Vigyan Prasar shall be a handy guide to scientists, researchers, and scholars, especially those who are interested in knowing various aspects of COVID-19 and contributing to the coronavirus warfare in whatever minuscule way and people at large.

Vigyan Prasar
New Delhi

DR. HARSH VARDHAN EXHORTS CSIR SCIENTISTS TO DEVELOP COVID-19 MITIGATION SOLUTIONS TO EFFECTIVELY COMBAT THE DISEASE

12th April 2020, New Delhi

- Genetic sequencing was crucial in eradicating Polio; it will help in COVID-19 mitigation also, said Dr. Harsh Vardhan
- These are times of war, deliver solutions before war ends, not a routine research project, states Dr. Harsh Vardhan
- COVID-19 will give boost to country's resilience and self-reliance and enhance indigenous capacity in developing critical healthcare equipment

Today Dr. Harsh Vardhan, Union Minister for Science & Technology held a review with DG CSIR, Dr. Shekhar C. Mande and all the CSIR lab directors through video conference of the steps undertaken by CSIR and its constituent 38 labs towards mitigation of Corona Virus outbreak in the country.

DG CSIR Dr. Shekhar C. Mande informed that Core Strategy Group (CSG) has been set up in CSIR and the five verticals have been identified under which the COVID-19-related activities are being carried out. These include: Digital and Molecular Surveillance; Rapid and Economical Diagnostics; New Drugs / Repurposing of Drugs and associated production processes; Hospital Assistive Devices and PPEs; and Supply Chain and Logistics Support

Dr Harsh Vardhan during video conferencing on research and developments initiatives on Covid-19 with the directors of CSIR labs

Systems. Dr. Mande also mentioned that 15 CSIR labs are working in close partnership with major Industries, PSUs, MSMEs and other departments and ministries at the time of the crisis in the country.

After briefing of all the efforts being made by the CSIR labs in finding a solution for COVID-19, Dr. Harsh Vardhan informed them about the steps being taken by the Government of India in combating COVID-19.

Dr. Harsh Vardhan exhorted CSIR scientists and said, “India has high expectations from its scientific community and I am sure that the community will rise to the occasion and deliver in this time of need”. He appreciated that CSIR Labs were also participating in testing of swab samples of COVID patients and some of them have started doing genetic sequencing of the virus with a target of doing 500 sequencing in coming weeks. Dr. Harsh Vardhan said, “Genetic sequencing is very crucial in identifying the host response as well as identifying population vulnerability to the disease.” He said, “These genetic sequencing efforts remind me of Polio eradication movement 26 years back. Towards the fag end of the Polio movement, active surveillance of the country was done to find out the cases of acute flaccid paralysis. That time also, genetic sequencing was used to establish the travel history of polio virus which eventually helped in the eradication of polio.”

He also appreciated CSIR for partnering with MSMEs, Major industries, PSUs working on RT-PCR machines. He said, “Plasma-based therapy is very much needed at this hour. For this, we need to motivate the patients who have recovered from the COVID-19 to donate blood.”

He also appreciated the work done by CSIR-NAL with BHEL and BEL on Ventilators, Oxygen Enrichment Devices and 3-D printed face shields, face masks, gowns and other protective equipment. “All these things will help us in next few weeks”, he said.

Dr. Harsh Vardhan, however, cautioned CSIR scientists to develop COVID-19 mitigation solutions keeping fixed timeframe in mind. “These are times of war, CSIR scientists should work to deliver solutions before war ends, they should not treat it as a routine research project”. He said, “COVID-19 has also come as a blessing in disguise as it will give boost to country’s resilience and self-reliance and enhance indigenous capacity in developing critical healthcare equipment.” He also appreciated the collaboration being done by the CSIR scientists using Video Conferencing tools and reiterated the scientists that while doing research they should continue observing social distancing and lockdown because till such time vaccine is developed by scientists to combat COVID-19, these two remain the most potent form of social vaccine.

Dr. Shekhar C. Mande, DG, CSIR, Dr. Anurag Agrawal, Director, Institute of Genomics and Integrative Biology (CSIR-IGIB) and Dr. Nakul Parashar, Director, Vigyan Prasara were present in the review meeting with the Union Minister. Directors of remaining 38 CSIR labs attended the meeting through Video Conference.

SCIENCE & TECHNOLOGY EFFORTS TO DEAL WITH COVID-19 BY

OFFICE OF THE PRINCIPAL SCIENTIFIC ADVISER (PSA)

Expanding testing facilities in the country

The Empowered Committee on R&D has worked towards enhancing the testing facilities to meet COVID-19-related challenges by leveraging the existing resources (instruments and human resources) in Government of India laboratories. It has enabled ICMR to issue the required notification allowing institutions under DST, DBT, CSIR, DAE, DRDO and Indian Institute of Science (IISc) to self-assess and prepare their BSL labs for research and testing of coronavirus.

The O/o PSA has developed a “Handbook for COVID-19 testing in Research Institutions” which allows more such labs to self-assess its preparedness in terms of equipment, staff and expertise required for COVID-19 testing. A detailed checklist has been outlined, which can be used by a research lab to self-assess and indicate their preparedness for declaring the lab as a research and testing facility for COVID-19 after ICMR approval. (This handbook has been assembled by a group of young researchers whose efforts are gratefully acknowledged).

Guidelines for Hygiene and Sanitation in Densely Populated Areas, During the COVID-19 Pandemic

SCIENCE & TECHNOLOGY EFFORTS ON COVID-19

BY

DEPARTMENT OF SCIENCE AND TECHNOLOGY (DST)

Women in Hoshiarpur district of Punjab prepare homemade masks for villagers to fight COVID-19

In Gugwaal Haar village situated in Hajipur Block of District Hoshiarpur, Punjab, a group of young women, are working tirelessly to safeguard their residents of their villages and those in the vicinity, vulnerable migrant workers and ration and food supply distributors from COVID 19 infections by making and distributing face masks free of cost. The group led by the village Sarpanch Sh Narinder Singh.

The Punjab State S&T Council (PSCST) Chandigarh has received support from the Department of Science & Technology (DST) under the societal programme for women working on the project titled 'Technological Empowerment of Women on Energy from Rural Biomass' (implemented in the Talwara block of district Hoshiarpur) to launch this initiative for the community in the scenario of Pandemic COVID-19.

Study to identify biomarkers to predict progression from non-severe to severe COVID 19 cases can help interventions

The Science and Engineering Research Board (SERB), a statutory body under the Department of Science and Technology (DST), will support the exploration of metabolomics alteration in COVID-19 infected patients conducted by IIT Bombay in collaboration with some hospitals in Mumbai.

The study will identify potential biomarker candidates to predict progression from non-severe to severe COVID-19 conditions. Search for potential diagnostic candidates will involve metabolite profiling of different patient groups with various complications. Metabolites are small biomolecules, capable of regulating multiple pathways in all the living-organisms.

Book chapter on the structure of the coronavirus

A member of the Soft Condensed Matter group at RRI is writing a book chapter on the structure of the coronavirus. This chapter includes general morphological features as well as ultrastructural details with references to structure-function correlation and drug targeting aspects, including what is known about how hydroxychloroquine acts on the virus. This chapter will be part of a book on the coronavirus pandemic, its control and treatment as well as its social, political and economic effects on India and the world. This book caters to a niche audience that is interested in an in-depth analysis of the COVID19 situation from a detailed scientific and social perspective.

Website link:

<http://rri.res.in/index.html>

Mathematical models for spread of COVID-19: an explanation for non-scientists

Mathematical models are routinely used by scientists to describe and predict natural phenomena. For example, in the current situation, we are all exposed to predictions based on mathematical modelling of COVID 19 pandemic by experts. The predictions from these models sometimes differ widely, and it may be confusing to citizens and political leaders, who have to make important decisions based on these predictions. Thus, a popular explanation of these models may help clear the confusion and be socially useful. With this goal in mind, theorists at RRI are writing a popular article titled: "MATHEMATICAL MODELS FOR SPREAD OF COVID-19: an explanation for non-scientists".

<http://rri.res.in/index.html>

Integrated geospatial platform to help area-specific strategies & decisions in COVID-19 outbreak

The Department of Science and Technology (DST), Government of India, has created an Integrated Geospatial Platform out of available geospatial datasets, standards-based services, and analytic tools to help decision making during the current COVID-19 outbreak and aid devising area-specific strategies to handle the socio-economic impact in the recovery phase. The platform is initially expected to strengthen the public health delivery system of the State and Central Governments and subsequently provide the necessary geospatial information support to citizens and agencies dealing with the challenges related to health, socio-economic distress, and livelihood challenges. The mobile application SAHYOG as well as the web

portal (<https://indiamaps.gov.in/soiapp/>) prepared and managed by the Survey of India (Sol) has been customized to collect COVID-19-specific geospatial datasets through community engagement to augment the response activities by Government of India to the pandemic. Information parameters required as per the Govt. of India strategy and containment plan for large outbreaks have been incorporated in the SAHYOG application. This mobile application will complement the “AAROGYA SETU” mobile application launched by the Government of India for Contact tracing, Public awareness, and Self-assessment objectives. State Spatial Data Infrastructure (SSDI) in Madhya Pradesh, Odisha, Punjab, and Jammu & Kashmir have been providing collateral standards-based geospatial data services to the State and District Level authorities in the respective States through State Geoportals for integration with related health datasets towards combating COVID-19 pandemic.

Special Call under SATYAM to fight against COVID-19

Department of Science and Technology invites concept note under ‘Science and Technology of Yoga and Meditation (SATYAM)’ for the appropriate intervention of yoga and meditation to fight against COVID-19 and other similar kinds of viruses. This special call aims to provide assistance to our society in today’s critical condition arising due to the pandemic COVID-19. The project may address on improving immunity, improving respiratory system, stress, anxiety, depression and others.

The concept note may be submitted at e-PMS (onlinedst.gov.in) till April 30, 2020.

<https://dst.gov.in/callforproposals/special-call-under-satyam-fight-against-covid-19>

Call for Expression of Interest - 2nd Set of Products

Sree Chitra Tirunal Institute for Medical Science and Technology (SCTIMST), Thiruvananthapuram, an institute of national importance under the Department of Science & Technology, Government of India, has developed designs and know-how for several products to combat the COVID-19 pandemic crisis. The institute is interested in transferring these designs and know-how to entities that can manufacture and make them available to the users. Expression of Interest (EoI) is invited from interested entities for this purpose.

Website link:

<https://www.sctimst.ac.in/resources/Rev-EOI%20COVID%2019%20-%2008.04.2020.pdf>

Expression of Interest for developing and manufacturing devices for the fast track Programme for COVID-19 pandemic

Sree Chitra Tirunal Institute for Medical Science and Technology (SCTIMST), Thiruvananthapuram invites manufacturers/startups/social groups who are interested in working with the Institute to co-develop and manufacture medical devices on a fast track mode to support the distressing situation created by the epidemic COVID 19. The call is for the development of Ambu bag-based Ventilators, Ventilator Sharing Kit, Battery-operated Assistive Breathing Unit, Isolation Pods, Disposable Safety Face Shield and Deployable Field Units.

Website link:

<https://www.sctimst.ac.in/RESOURCES/EOI%20COVID%2019%20-%2029.03.2020.pdf>

Proposals invited on COVID-19 & related respiratory viral infections

Science & Engineering Research Board (SERB), a statutory body of the Department of Science & Technology, invites proposals as part of special call under IRHPA (Intensification of Research

in High Priority Area) scheme designed explicitly for COVID-19 and related respiratory viral infections to ramp up national R&D efforts for new antivirals, vaccines, and affordable diagnostics.

Website link:
<https://dst.gov.in/pressrelease/proposals-invited-covid-19-related-respiratory-viral-infections>

TDB invites technology proposals for fighting COVID-19

The Technology Development Board (TDB), a statutory body of the Department of Science & Technology (DST) invites proposal applications from Indian companies and enterprises to address protection and home-based respiratory intervention for COVID-19 patients. The proposal may include technologically innovative solutions like low-cost masks, cost-effective scanning devices, technologies for sanitization of large areas as well as for contactless entry, rapid diagnostic kits, oxygenators, and ventilators.

Website link:
<https://dst.gov.in/pressrelease/tdb-invites-technology-proposals-fighting-covid-19>

Call for Proposals: Indo-U.S. Virtual Networks for COVID-19

The Indo-U.S. Science and Technology Forum (IUSSTF) announces a Call for Proposals for COVID-19 Indo-U.S. Virtual Networks. IUSSTF encourages proposals that convincingly demonstrate the benefits and value of the Indo-U.S. partnership to advance research and address critical challenges related to COVID-19. Virtual Networks would allow Indian and U.S. scientists and engineers currently engaged in COVID-related research to carry out joint research activities through a virtual mechanism, leveraging existing infrastructure and funding. These network projects could be of two types: Knowledge R&D Networks and Public-Private Virtual Networks.

Last date of submission: May 15, 2020

Website link:
<https://iusstf.org/announcements-and-events>

United States - India Science and Technology Endowment Fund COVID-19 Ignition Grants

IUSSTEF would select and support promising joint U.S.-India S&T-based entrepreneurial initiatives that address the “development and implementation of new technologies, tools, and systems to address COVID-19-related challenges including monitoring, diagnosis, health and safety, public outreach, information and communication”. These initiatives can originate from government, academic, non-governmental or commercial entities and any combination thereof, provided they focus on applied R&D and have commercial potential. USISTEF would also consider proposals related to technologies/products that can be re-purposed to address COVID-19 in the current scenario. USISTEF encourages projects that demonstrate a high degree of innovation leveraging advances in science and technology.

Last date of submission: May 15 2020

Website link:

SCIENCE & TECHNOLOGY EFFORTS ON COVID-19

BY

THE DEPARTMENT OF BIOTECHNOLOGY (DBT)

Startup Street: CCAMP launches accelerator to fast track COVID-19 related innovations

Startup Street: CCAMP launches accelerator to fast track COVID-19 related innovations: The report focuses on the mood of India's startup ecosystem, both founders and investors, on business continuity, fundraising and future outlook. CNBC-TV18 caught up with Sanjay Mehta, founder and partner at 100X.VC for details. Also, the Centre for Cellular and Molecular Platforms (C-CAMP) has launched C-CAMP COVID-19 Innovations Deployment Accelerator or C-CIDA to identify and fast-track immediately deploy-able or near ready COVID-19 innovations across India. The accelerator, which was launched on March 26, has so far selected 18 near deployment-ready COVID-19 innovations across critical categories such as rapid diagnostic kits, assisted respiratory devices, remote vital stats monitoring systems, and several others. CNBC-TV18 spoke to Taslimarif Saiyed, CEO and director at C-CAMP and discussed the innovations that are coming out of the accelerator.

Workshop to upskill COVID testing facilities

Department of Biotechnology's Biotechnology Industry Research Assistance Council (BIRAC) is holding a workshop to bring frontline workers, especially scientists, clinicians and lab technicians, dealing with the COVID19 crisis up to date on the various aspects involved in the diagnosis of the infection. The programme will focus on a better understanding of structural details of SARS-CoV-2 virus. This real-time PCR platform is used for detection of the virus, the practical requirements of the facilities and personal protective equipment needed in a diagnostic lab. The programme will, among other things, focus on the precautions that need to be taken while handling samples.

IHF's quest to support innovations to tackle respiratory diseases, including COVID-19

As Governments across the world grapple with containing COVID-19, the India Health Fund (IHF) is looking to support innovations that can fight respiratory and airborne infections through its nationwide search, Quest 2020. The quest will provide an opportunity for innovators, scientists and entrepreneurs across sectors to share novel prototypes, which could be game changers in the fight against these diseases, IHF added. Quest 2020's nationwide search for innovations is already open, and innovators have till April 22, 2020, to send in their applications. The primary aim of this initiative is to support the government's ambitious goal to eliminate tuberculosis in India by 2025 and join the fight against the deadly new coronavirus.

India's S&T institutions raise their game against COVID-19

With over 1.3 billion people in Her bosom, the spread of coronavirus in India and India's response mechanisms are being closely watched over by the rest of the world. Led by the Hon'ble Prime Minister, Narendra Modi, India is battling this virus with all its might. Invoking the Disaster Management Act of 2015, India announced a complete lockdown on March 25 for a period of 21 days. The early announcement of a lockdown, when the infected count was less than 400, was well appreciated by WHO. Setting up of a COVID-19 Task Force and announcement of a series of 'social distancing' and other serious measures.

C-CAMP picks 13 ideas to tackle the COVID-19 epidemic

A special accelerator focused on COVID-19 has identified 13 innovations, including assisted respiratory devices, air and surface sanitizing technologies and a cold-chain viral swab sample transport that could be deployed to tackle the epidemic. The identified innovations include assisted respiratory devices by Bidesign Innovation Labs and Aerobiosys Innovations and remote vital parameter monitoring systems from MedloTek Health Systems, Cardiac Design Labs, Nemocare and Dozee and air and surface sanitizing technologies from Leaf Box Technologies, Biomoneta and Clensta.

COVID GYAN

Covid Gyan serves as a hub to bring together a collection of resources in response to the COVID-19 outbreak. These resources are generated by research institutions in India and several associated programmes. The content presented on the website provides a scientific understanding of the disease and its transmission. The main objective of the website is to create public awareness and bring in a holistic approach to the understanding of COVID-19 disease and potential means to mitigate it.

Various autonomous institutions associated with the Department of Biotechnology (DBT) are resource providers to this initiative, like the Institute for Stem Cell Science and Regenerative Medicine (InStem) and the Centre for Cellular And Molecular Platforms (C-CAMP).

Minister exhorts scientists to develop COVID-19 mitigation solutions within fixed timeframe

Union Minister for Health and Family Welfare, Science and Technology and Earth Sciences, Dr Harsh Vardhan, exhorts scientists to develop COVID-19 mitigation solutions within a fixed time frame. "We are in midst of a war and we have to supply the weapons on time. If we supply the weapons when the war is over or have made huge destruction the weapons are useless. It is not like routine CSIR research job," said Dr Harsh Vardhan. He was addressing a review meeting through video conferencing with Dr Shekhar Mande, Director General of the Council for Scientific and Industrial Research (CSIR) and all the 38 CSIR lab directors.

कोविड-19 से निपटने में महत्वपूर्ण हो सकता है आनुवांशिक अनुक्रमण

आनुवांशिक अनुक्रमण वायरस के प्रति वाहक की प्रतिक्रिया का पता लगाने के साथ-साथ बीमारी के प्रति जनसंख्या की संवेदनशीलता की पहचान करने में भी बेहद महत्वपूर्ण हो सकता है। यह बात स्वास्थ्य एवं परिवार कल्याण, विज्ञान एवं प्रौद्योगिकी और पृथ्वी विज्ञान मंत्री डॉ हर्ष वर्धन ने कही है। वह वैज्ञानिक तथा औद्योगिक अनुसंधान परिषद (सीएसआईआर) द्वारा कोविड-19 के संदर्भ में किए जा रहे प्रयासों के बारे में वीडियो कॉन्फ्रेंसिंग के जरिये आयोजित एक समीक्षा बैठक को संबोधित कर रहे थे।

कोहरे की इन सूक्ष्म बूंदों से उपचार रोक सकता है कोविड-19 का विस्तार

कोहरा घना हो तो अक्सर दुर्घटना की आशंका रहती है। लेकिन, अब पुणे स्थित राष्ट्रीय रासायनिक प्रयोगशाला (एनसीएल) के परिसर में कोहरे की सूक्ष्म बूंदों का उपयोग कोविड-19 के संक्रमण से बचाव के लिए किया जा रहा है।

कोविड-19 के खिलाफ गाँवों में अलख जगा रही सीएसआईआर प्रयोगशाला

अपने अनुसंधान के जरिये समाज की मदद करने वाला वैज्ञानिक समुदाय अब कोविड-19 के प्रकोप को देखते हुए लोगों को जागरूक करने के लिए जमीन पर भी उतर रहा है। इस सामाजिक जिम्मेदारी को निभाते हुए भोपाल स्थित एडवॉंस्ड मैटेरियल्स एंड प्रोसेस रिसर्च इंस्टीट्यूट (एम्प्री) भी ग्रामीण स्तर पर कोविड-19 के संक्रमण को रोकने की कोशिशों में जुट गया है।

SCIENCE & TECHNOLOGY EFFORTS ON COVID-19

BY

THE INDIAN COUNCIL OF MEDICAL RESEARCH (ICMR), AND THE MINISTRY OF HEALTH & FAMILY WELFARE (MOHFW)

Advisory on feasibility of using pooled samples for molecular testing of COVID-19

An advisory has been issued by Indian Council of Medical Research (ICMR), the apex body of medical research in India, to increase the capacity of the laboratories for screening increased numbers of samples using molecular testing for COVID-19 for the purpose of surveillance.

Website link:

https://icmr.nic.in/sites/default/files/upload_documents/Advisory_on_feasibility_of_sample_pooling.pdf

Newborns may get Covid-19 transmission from mothers: ICMR issues guidelines

According to the Indian Council of Medical Research (ICMR), there is a possibility of transmission of coronavirus from a pregnant mother to a newborn baby. However, the proportion of pregnancies affected and the significance to the newborns is yet to be determined.

ICMR seeks participation for trial of plasma therapy for Covid-19 treatment

The primary objective of the treatment will be to assess the safety and efficacy of convalescent plasma in treating Covid-19 patients. Plasma from a cured patient is assumed to have antibodies against the virus and this can then be used to cure another patient.

SCIENCE & TECHNOLOGY EFFORTS ON COVID-19

BY

THE DEFENCE RESEARCH AND DEVELOPMENT ORGANISATION (DRDO)

Mathematical Estimation for TRacking Infections of COVID-19 Spread (METRICS) in India

Manohar Parrikar Institute for Defense Studies and Analysis (MP-IDSA), New Delhi has developed a method of Mathematical Estimation for TRacking Infections (METRICS) of COVID-19 Spread in India and is generating a daily estimation report based on data available.

https://drdo.gov.in/sites/default/files/inline-files/DRDO_PressBrief_Total_4april2020.pdf

Sample Testing for COVID 19

Defence Research and Development Establishment (DRDE), Gwalior is functioning as a centre for detection of COVID-19 positive cases from samples provided by Madhya Pradesh Health Service. DRDE has potential to perform confirmatory test akin to NIV, Pune, on authorization by Government of India. Testing has been successfully completed for 36 samples from five districts out of which four have been found positive.

Bio Personal Protective Equipment (BIO-PPE) to cover all with shoe cover for healthcare professionals

Defence Research and Development Organisation (DRDO) has developed a bio suit to keep the medical, paramedical and other personnel engaged in combating COVID-19 safe from the deadly virus. Scientists at various DRDO laboratories have applied their technical know-how and expertise in textile, coating and nanotechnology to develop the Personal Protective Equipment (PPE) having specific type of fabric with coating.

OTHER SCIENTIFIC AND ACADEMIC INSTITUTIONS

IIT Ropar develops design of Negative Pressure rooms to check spread of COVID 19

IIT Ropar has sent their proposal to the Ministry of Human Research and Development (MHRD) and principal scientific adviser for creating negative pressure isolation rooms on a mass scale to prevent room-to-room cross-contamination in hospitals. The negative pressure room ensures that released droplets of the infected do not stay suspended and is sucked out through the ventilation. South Korea has been able to contain the COVID-19 through their mobile and drive through testing facilities which have negative pressure rooms. The testing labs and isolation rooms (which have one or more COVID patient) need to be converted into negative pressure rooms for the safety of health workers.

Ventilator that can treat two patients, courtesy IIT Ropar scientists

In a significant achievement in fighting the Coronavirus, the IIT Ropar researchers have now come up with the low cost and portable ventilators that can be easily and quickly manufactured as per the requirement. These ventilators can provide oxygen to two patients at a time.

IIT-Ropar scholar, private engineers group, develop an app to prevent community transmission

IIT-Ropar scholar and some engineers of Lagom Innovation Pvt of different streams have developed an android application that may prove helpful in curbing the community transmission of the virus. The app can identify the suspect within a distance from 1 to 3 meters. The app also maintains a record of the persons coming contact with each other for 14 days and this will and this will make easy to trace out the persons who had come in contact with the COVID-19 suspect.

PRIVATE SECTOR ENTERPRISES

Reliance Industries further Steps Up its Support to India's Fight Against Coronavirus

Reliance Industries Limited has deployed the combined strengths of Reliance Foundation, Reliance Retail, Reliance Jio, Reliance Life Sciences, Reliance Industries, and all the 6,00,000 members of the Reliance Family on this action plan against COVID-19.

Reliance Foundation and RIL Hospitals: Sir H. N. Reliance Foundation Hospital in collaboration with the Brihanmumbai Municipal Corporation (BMC), has set up a dedicated 100 bedded centre at Seven Hills Hospital, Mumbai for patients who test positive for COVID-19. This first-of-its-kind-in-India centre is fully funded by Reliance Foundation and includes a negative pressure room that helps in preventing cross-contamination and helps control infection. All beds are equipped with the required infrastructure, biomedical equipment such as ventilators, pacemakers, dialysis machine and patient monitoring devices.

Masks and Personnel Protective Suits for Health-workers: RIL is enhancing its production capacities to produce 100,000 face-masks per day and a large number of personal protective equipment (PPE), such as suits and garments, for the nation's health workers to equip them further to fight the coronavirus challenge.

The Race for a Cure for COVID-19

In TCS' Innovation Lab in Hyderabad, India, a team of TCS scientists have identified 31 molecular compounds that hold promise towards finding a cure for COVID-19. The effort is part of the many worldwide mission critical activities that TCS is engaged in, working with private enterprise and governmental groups. It represents a crucial breakthrough supporting the larger worldwide endeavour towards combating the coronavirus.

Logix Smart™ COVID-19 Test Kit developed by Cosara Diagnostics, Ahmedabad

Ahemdabad based private sector enterprise, Cosara Diagnostics has developed and manufactured Logix Smart™ Coronavirus Disease 2019 (COVID-19) Test kit. This is an in vitro diagnostic test that uses patented CoPrimer™ technology for the qualitative detection of the RNA from SARS-CoV-2 coronavirus (COVID-19). The test operates using a real-time RT-PCR test technique intended for the in vitro qualitative detection of nucleic acid from severe acute respiratory syndrome coronavirus 2 (SARS-CoV-2) in lower respiratory samples (e.g. bronchoalveolar lavage, sputum, tracheal aspirate), and upper respiratory samples (e.g. nasopharyngeal and oropharyngeal swabs) from individuals suspected of having COVID-19 by their healthcare provider. Results are for the identification of SARS-CoV-2 RNA during the acute phase of infection. The Logix Smart Coronavirus Disease 2019 (COVID-19) is intended for use by qualified and trained clinical laboratory personnel specifically instructed and trained in the techniques of real-time PCR and in vitro diagnostic procedures. The test kit has been tested with the QIAamp® Viral RNA Mini Extraction Kit (Qiagen) on the CoDx Box thermocycler (Bio Molecular Systems).

Pune Face Shield Action Group has delivered 12900+ face shields

Pune Face Shield Action Group has provided 12900+ face shields so far. Efforts to scale up production by replacing rate-limiting steps (esp. laser cutting), efforts to identify new sources for supply, efforts to raise funds, efforts to find others who can help manufacture these Face Shields in larger quantities, efforts to find people in other cities who can reproduce the model in their cities/areas — success in Aurangabad, Nanded so far.

Mylab partners with Serum Institute India's CEO Adar Poonawalla and Abhijit Pawar, Chairman AP Globale to scale-up production of the COVID-19 test kit

Mylab Discovery Solutions has developed the first COVID-19 rapid testing kit in India. This testing kit has been approved by the Indian Food and Drug Administration, the Central Drugs Standard Control Organisation (CDSCO), and the ICMR. This kit can give test results within 2.5 hours. After joining hands with Serum Institute of India and AP Globale, the test capacity of Mylab has increased from 1.5 lakh tests a week to 20 lakh (2 million) tests a week.

DST funded company to scale up device to enrich oxygen supply in air for the treatment of COVID-19 patients

Genrich Membranes, a spin-off company, based on proprietary technology licensed from CSIR-National Chemical Laboratory, Pune is being funded by the Department of Science and Technology (DST) to scale up membrane oxygenator equipment (MOE) that it has developed to treat COVID-19 patients. Based on innovative, indigenous hollow-fiber membrane technology, the MOE enriches oxygen in the air up to 35% under pressure (4-7 bar, using oil-free compressor).

The equipment consists of membrane cartridge, oil-free compressor, output flowmeter, humidifier bottle, nasal-cannula, and tubing & fittings. The compressed, filtered air from the compressor is fed to the membrane cartridge, which selectively permeates oxygen over nitrogen offering oxygen-enriched air as the product at the ambient pressure. The membrane cartridge capable of distinguishing oxygen and nitrogen restricts the passage of viruses, bacteria, and particulate matter. The product air is of medical grade.

The device is safe, does not require trained manpower for its operation, needs minimum maintenance, is portable, compact, and with plug-and-play facility provides on-site, quick-start oxygen-enriched air.
